College Projects

Online Voting System

Online Voting system manages the voter's info for voters to login and use his/her voting rights. It provides the tools for maintaining voter's vote to every party and its count of every party which can be done by admin or ECI. The project uses java to display the UI and SQL to store the details in the database.

Food Order Management System

The project is developed in Java using JDBC to enhance and automate the hotel management for different users like admin and end-users. It has many features for admin(owner) as well as end-user(customers).
